## SUPERIOR SOLUTIONS. PROVEN RESULTS.

Since 1985, Taylor Data Systems (TDS) has been a leader in the development and implementation of automated data collection and data management solutions in manufacturing, distribution, field service and healthcare environments. These solutions are designed to increase worker productivity, reduce errors and improve customer service. Whether you're looking for a warehouse management system, want to improve operational effectiveness, or are ready to automate existing paper-based processes, we provide the best solutions to accommodate your needs and improve efficiency in these areas:

asset tracking

pick / pack / putaway

integrated process control

field service applications

inventory tracking

track & trace

workflow solutions

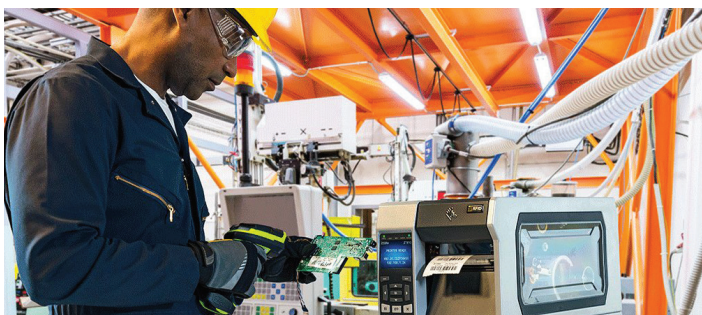

custom label & tag applications

TDS specializes in RFID and barcode application development and programming, as well as mobile device and wireless network configuration. This service is beneficial to many of our customers who have limited IT resources and/or bandwidth to configure, deploy and connect devices.

## DEVICE INTEGRATION & MEDIA

With the fast-moving pace of technology today, there are a lot of hardware options on the market to help you improve operations. Our device integration experts provide recommendations based on your unique requirements.

### OUR INTEGRATION SERVICES INCLUDE:

- Mobile Computing Devices
- Handheld Barcode Scanners
- Industrial Barcode Printers
- Wearable Computing & Scanning Devices
- Tablets
- RFID Devices
- Labels, Tags & Accessories
- Custom Labels & Tags

## CUSTOM SOFTWARE DEVELOPMENT

We develop mobile, desktop and tablet software applications built around specific customer needs. Our strategy is designed to anticipate and accommodate business growth, providing the flexibility needed for today and tomorrow. We offer full project lifecycle services from discovery and definition through implementation.

- Custom line-of-business applications for field services
- Mission-critical business applications for desktops
- Browser-based applications for servers
- Back-end host services to provide secure and scalable interfaces for browser-based applications.

## SYSTEM ANALYSIS & CONSULTING

Businesses must be able to provide fast, accurate service to customers with products that are available, shipped on time, and shipped correctly. If you're looking to optimize workflow or just want ideas to help you gain a competitive edge, we'll conduct an onsite evaluation of your processes and work with you to develop a practical improvement plan.

- Recommendations on best-fit technology
- RFID feasibility in your environment
- Process workflows
- Feedback / recommendations on internal and compliance labeling

## SYSTEMS INTEGRATION

Your IT team has a lot on their plate. That's why we offer integration services to offload the task of setup and deployment of devices, network configuration, troubleshooting and training. This allows your internal staff to focus on higher priorities within your business. Our services include:

- Device configuration
- Wireless network configuration
- Installation & set up
- User training

## OUR PROCESS SETS US APART

Our goal is to ensure clients perform better and reach their growth goals without the worry of outgrowing their technology. For project implementation, we use a tried-and-true engagement process that includes creating a statement of work with critical milestones, then conduct extensive pre-testing before implementation begins.

We understand your success and our reputation rely on product quality and performance. That's why we partner with leading manufacturers that have proven reputations for durability and operation in tough environments.

### ANYONE CAN SELL, BUT NOT EVERYONE CAN SOLVE

Whether you are a manufacturing company trying to improve process flow and inventory tracking, a field service organization trying to increase worker productivity, or a medical lab trying to optimize specimen tracking\* you have one thing in common – a need for technology products for data capture, data management and data transfer.

While a lot of companies sell these products, that's all many of them do. At TDS, we have extensive knowledge of the vertical markets in which we serve. Using best practices and years of experience, our team provides the solutions that enable your business to succeed.

**Is there room for operational improvement in your organization?**
